                                                                                                                                                                                                                                                                The invention relates to an adeno-associated virus (AAV) clade comprising at least three AAV members, where each member of the AAV clade is phylogenetically related as determined using a Neighbor-Joining heuristic by a bootstrap value of at least 75 % per 1000 isolates and a Poisson correction distance measurement of no more than 0.05. The methods and compositions of the present invention are useful for the prevention and/or treatment of rheumatoid arthritis, multiple sclerosis, sarcoidosis, aclaroderma, psoriasis, wasculitis, Crohn's dispets, scleroderma, psoriasis, vasculitis, Crohn's dispease, hemophilia, HIV, bacterial infection, cancer and ulcerative colitis. The present sequence represents an adeno-associated virus DNA.
                                                                                                                                          members, useful for preventing and/or treating arthritis, multiple sclerosis, diabetes, scleroderma, psoriasis, hemophilia, HIV, bacterial infection and cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  GCTTCAACGGGGCCAGCAACGACAACCACTACTTCGCCTACAGCACCCCCTGGGGGTAT

New adeno-associated virus (AAV) clade comprising at least three AAV members, useful for preventing and/or treating arthritis, multiple sclerosis, diabetes, scleroderma, psoriasis, hemophilia, HIV, bacterial infection and cancer.
                                                                                                rheumatoid arthritis; multiple sclerosis; sarcoidosis; diabetes; scleroderma; psoriasis; vasculitis; Crohn's disease; hemophilia; HIV; bacterial infection; cancer; ulcerative colitis; antiheumatic; antiarthritic; neuroprotective; antiinflammatory; antidiabetic; antiarthripsoriatic; vasorropic; gastrointestinal-gen.; hemostatic; anti-HIV; virucide; antibacterial; cytostatic; antiulcer; dermatological; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to an adeno-associated virus (AAV) clade comprisi at least three AAV members, where each member of the AAV clade is phylogenetically related as determined using a Neighbor-Johingh heurist by a bootstrap value of at least 75 % per 1000 isolates and a Poisson correction distance measurement of no more than 0.05. The methods and compositions of the present invention are useful for the prevention and/or treatment of rheumatoid arthritis, multiple sclerosis, esarcoidosis, diabetes, scleroderma, psoriasis, vasculitis, Crohn's disease, hemophilia, HIV, bacterial infection, cancer and ulcerative colitis. The present sequence represents an adeno-associated virus DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    AATGCCTCAGGAAATTGGCATTGCGATTCCACATGGCTGGGCGACAGGAGTCATCACCACC

The methods and compositions of the present invention are useful for the prevention and/or treatment of rheumatoid arthritis, multiple sclerosis, sarcoidosis, diabetes, scleroderma, psorialsis, vasculitis, Crobn's disease, hemophilia, HIV, bacterial infection, cancer and ulcerative colitis. The present sequence represents an adeno-associated virus DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       rheumatoid arthritis, multiple sclerosis; sarcoidosis; diabetes; scleroderma; psoriasis; vasculitis; Crohn's disease; hemophilia; HIV; bacterial infection; cancer; ulcerative colitis; antirheumatic; antiarthritic; neuroprotective; antilfammatory; antidiabetic; antipsoriatic; vasotropic; gastrointestinal-gen; hemostatic; anti-HIV; virucide; antibacterial; cytostatic; antiulcer; dermatological; ds.

The library was characterised by oligonucleotide fingerprinting
Tooredure, clones that display the same hybridiastion matrix with a
procedure, clones that display the same hybridiastion matrix with a
battery of 200 8mer oligonucleotides are grouped into clusters. One
clone per ONFP cluster was selected for sequencing. cDNA clones and
filters are distributed via Deutsches Ressourcenzentrum fuer
Genomiconschung GmbH (http://www.rzpd.de).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      CO888893 110-SEP-2004 BovGen 17218 normal cattle brain Bos taurus cDNA clone RZPDP105600960Q 5', mRNA sequence.

Sequence 12, Application US/09807802A

Patent No. 6759237

GENERAL INVENTION:

APPLICANT: Xiao, Weidong

TITLE OF INVENTION: Adeno-Associated Virus Serotype I Nucleic Acid Sequences,

TITLE OF INVENTION: Adeno-Associated Virus Serotype I Nucleic Acid Sequences,

TITLE OF INVENTION: Adeno-Associated Virus Serotype I Nucleic Acid Sequences,

TITLE OF INVENTION: Adeno-Associated Virus Serotype I Nucleic Acid Sequences,

CURRENT APPLICATION NUMBER: US/09/807,802A

CURRENT FILING DATE: 1998-11-05

PRIOR PALICATION NUMBER: US 60/107,114

PRIOR PILING DATE: 1998-11-05

PRIOR APPLICATION NUMBER: US 60/107,114

PRIOR PILING DATE: 1999-11-05

NUMBER OF SEQ ID NOS: 20

SOFTHARE: PatentIn version 3.1

SEG ID NO 12

LENGTH: 2211
